

Lab Component Management System

A PROJECT REPORT

Submitted by

Shashank Bagda (92100133020)

Vivek Patel (92100133016)

In partial fulfillment for

OOP (01CT0105) Project

Sem – 2nd

Degree ENGINEERING

in

Information and Communication Technology Engineering

Faculty of Technology Studies

Marwadi University, Rajkot

Acknowledgement

A successful project is a fruitfull culmination of efforts of many people, some directly involves while other that have quietly encouraged and extended their support while being in the background.

We are grateful to Prof Kapil Shukla (Prof at Marwadi University) not only for his invaluable guidance but also for his unending encouragement that he has given to us throughout the Java course and project. This work is a reflection of his teachings and expertise in the subject that he has passed on to us.

As a team we Shashank Bagda and Vivek Patel are submitting this document. We declare that the above acknowledgement and this documentation along with this project : “Lab Component Management” in its entirety is truthful, honest and in complete reflection of our work.

Frame 2 : Add Student (login).

Frame 3 : Component List.

Frame 4 : Validation Page.

Frame 5 : Return.

Frame 6 : About Us.

Frame 7 : Issue Successful.

Frame 8 : Return Successful.

Action Listener Code.

3 : Meeting with client

4 : Conclusion.

5 : Updated Code

Frame 3 : Component List

Action Listener Code

1 :- Detail

As per our client requirement we have make a project for the management of the component of lab. We have to store data of the student and transition's done by them . If any component is broken then there will be fine on the student so total fine which is to be paid by the student is send on the mail.

For the record of student they have to write their Name, Enrollment Number and Email address. After filling all the details .txt file of that student will be created in the formate of 921001330XX.txt . Now if student want to issue components from lab they have to click on explore button. After that when student issues the component they will be asked for enrollement number . When they will give their enrollement number their record from .txt file and system will generate OTP and send it to the email recorded in the txt file of student. After verification of OTP new frame will be displayed showing successful issuing of component and also mail will be sent for the same.

For the return of component we have to enter the enrollement of the student and if component is damaged then number of damaged component. New Frame will be opened after ruterning of component showing return successfully and mail will be send for the same to mail in the record of student . If any component is broken then fine to be paid will be sent to the same gmail.

2:- SnapShots and code

Frame 1 :- HOME PAGE.

This frame is used as home screen. We can see total number of student added in the record. We can see 5 buttons in this frame that are as below

1:- Logout

2:-Add Student

3:- Return

4:- About Us

5:- Explore

Code:-

```
import java.awt.*;
import java.awt.event.*;
import java.io.*;
import javax.swing.*;
import java.lang.*;
```

```

3 :-Meeting with client

Client Name:-

Yash Vara (92100133056)

Jyot Joshi (92100133003)

First Meet :-

In this meeting our client had given use the project definition nad gave us briefing about what they want in this project to be included.

Second Meet :-

Second meet was conducted after our GUI was ready. We had shown our client Class and GUI. They gave us suggestion for adding some more images and show total number of student using this system.

Third Meet :-

Third meet was done after completion of our action listener. The client have asked to use for things like different fine on different component if they are broken and show the total number of items in the cart before issuing.

4 :- Conclusion

In this project we have learned about java language in deep. We got to know many new thing like sending gmail to any student's gmail by just entering his\her enrollement number system will find gmail address from the txt file saved. We have learned how to generate OTP. How to put image in the background and on the button.

5 : Updated Code

FRAME 3 :

Here I added an extra feature which shows the total number of components you are going to issue. It can be seen as the number of items added to cart. Also I created 0 to 10 button icons which represent the issued components. Like if we take 5 battery then the circle representing the battery shows 5. Here are the images...

Also added on additional Delete button on the top right side of the frame, which will delete the last issued component from the list and also update the text field which represent the Cart.

This changes are suggested by the IT Team of the Marwadi University on the day of Project Demostration and I successfully implemented it.

CODE :

```
import java.awt.*;
import java.awt.event.*;
import java.io.*;
import javax.swing.*;
import java.lang.*;
import javax.swing.JFrame;
import javax.swing.border.Border;

public class MyFrame1 extends Frame
{
    JButton b1,b2,b3,b4,b5,b6,b7,b8,b9,b10,b11,b12,b13,b14,b15;
    TextField t1;
    int cart=0;
    MyActionListener ml;
    MyFrame1()
    {
        setLayout(null);
        ml = new MyActionListener(this);

        t1 = new TextField();
        t1.setBounds(128,655,104,80);
        Font f1 = new Font("Comic Sans MS",Font.BOLD,75);
        t1.setFont(f1);

        add(t1);
        t1.setText("" + cart);

        JButton b1 = new JButton("Checkout");
        b1.setIcon(new ImageIcon(this.getClass().getResource("Images/listb1.png")));
```

```
        b1.setBounds(186,504,156,80);

```

```
b15.addActionListener(ml);
```

```
addWindowListener(new WindowAdapter()
```

```
{
```

```
    public void windowClosing(WindowEvent we)
```

```
    {
```

```
        System.exit(0);
```

```
    }
```

```
});
```

```
}
```

```
    public void paint(Graphics g)
```

```
{
```

```
    Toolkit t=Toolkit.getDefaultToolkit();
```

```
    Image i=t.getImage("Images/list.png");
```

```
    g.drawImage(i, 0, 0,this);
```

```
}
```

```
}
```

Action Listener :

Another update I did in my code is, I added **touch sound**, which means when we click any of the button it will play a pop sound. Which makes the frame more interactive to the user and also becomes more catchy to interacting person.

CODE :
